# HOW TO BUILD A FISHING LINE RECYCLING STATION

## SUPPLIES NEEDED

- |                                  |                                    |
|----------------------------------|------------------------------------|
| (1) 6" PVC Pipe – 2 ft. long     | (1) 6" PVC Elbow                   |
| (1) 6" PVC Female Thread Adapter | (1) 6" Threaded Plug               |
| Clear PVC Primer and Glue        | Decals with Recycling Instructions |

## STEPS FOR BUILDING

- 1) Clean the first 2 inches of both ends of the PVC pipe using clear PVC primer
- 2) Clean one of the openings of the 6" PVC elbow using clear PVC primer
- 3) Clean the collar end of the 6" PVC female thread adapter using clear PVC primer
- 4) Apply a small amount of the clear PVC glue to one of the clean ends of the 6" PVC pipe
- 5) Attach the cleaned collar end of the 6" PVC female thread adapter to the glued section of 6" PVC pipe (Immediately wipe away excess glue)
- 6) Apply a small amount of the clear PVC glue to the second clean end of the 6" PVC pipe
- 7) Attach the cleaned end of the PVC elbow to the glued section of the 6" PVC pipe (Immediately wipe away excess glue)
- 8) Ensure that all connections are tight
- 9) Drill a hole into the cap to ensure water will not collect within the tube (optional)
- 10) Screw the threaded cap into the adaptor
- 11) Apply decals to the tube with the bottom of the decal nearest the threaded cap and the top near the elbow. The opening of the elbow should align with the decal.
